Visendo Fax and Email Suite integration with Office 2010

An overview on Client Side and Server Side

Achieve more with less

✓ Server side integration: Sharepoint 2010, Exchange 2010 UM integration

✓ Client Side integration: using your Outlook 2010 in conjunction with Visendo Fax Server

✓ TiFF Filter: Document Corporate Search

Abstract: Office 2010 and Sharepoint 2010 improvement

While many organizations are tempted to roll-out SharePoint 2010 without updating to Office 2010, there are many features that they can miss in this situation: from Word Document Co-Authoring to Outlook plug-ins for social features that come with SharePoint 2010. Therefore, depending on company needs to follow-up with nowadays technological and social trends, they will decide if it is necessary to update to Office 2010 or stick to Office 2007. Visendo Suite can be fully integrated with both Office 2010 and Sharepoint 2010 offering full flexibility to those interested in issues like: document collaboration and search, security and vulnerability features. Visendo Suite can easily be integrated on both Server Side or and Client Side, depending on your organization needs.
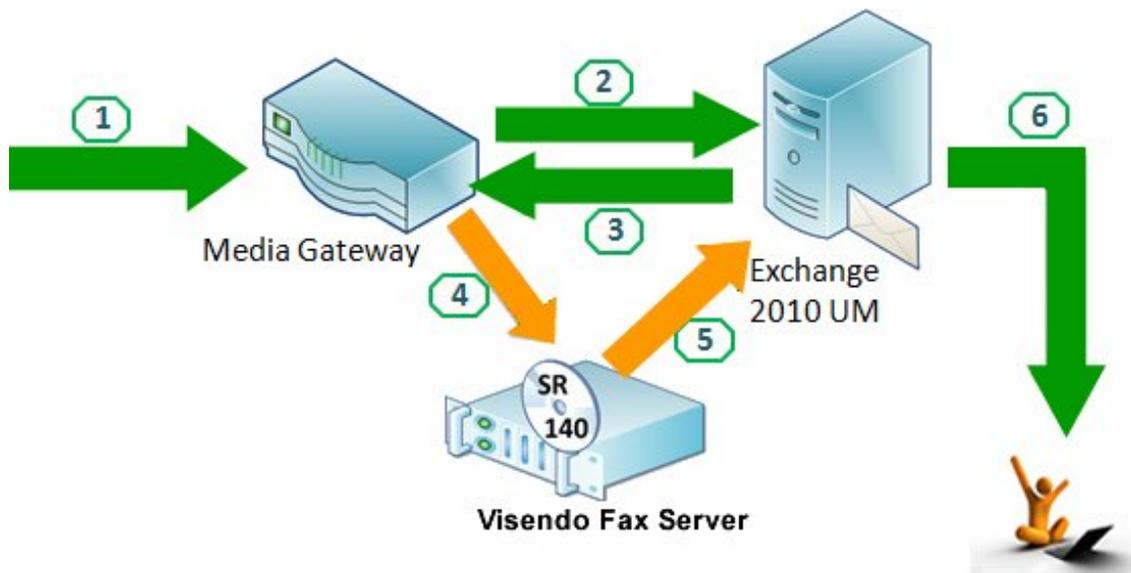

1. Server Side Integration: SharePoint 2010, Exchange 2010 UM integration

Faxing is still heavily used in industries where sending invoices, orders, offers and other types of related documents are important.

Visendo Fax Server users can now create fax documents in Microsoft Office and send them out as a fax, or save them to **SharePoint** with the added security of keeping the original fax document in a **SharePoint** library.

Customers use **SharePoint Server** (whether 2007 or 2010) every day for content management, enterprise search, and business process enablement. Since a captured fax image is typically the beginning of a business process needing automation, and sending a fax can often be the final step of a process, Fax Server easily enables automatic import or export of document images sent from MFPs, scanners, and fax. Images imported from Visendo automatically populate configured SharePoint libraries so users can select files for additional business processes using OCR and data workflow systems.

With **Exchange 2007 UM**, there was a built-in option to process faxes that were received through UM so that the faxes could be sent to UM-enabled users. With **Exchange 2010**, this built-in option was discontinued, but an option to refer the fax traffic to a certified fax partner was enabled. **Visendo Fax Server** is able to process these inbound faxes so that there is no notable change for users who are used to receiving faxes in Exchange 2007.

2. Client Side Integration: Outlook 2010

Visendo Fax Server, Mailchecker Server and **popConnect** can be fully integrated with Outlook 10 to better assure email deliverability and security. The main purpose is to have receive faxes directly to the Outlook 2010 Inbox and ensure that vulnerabilities and security flaws are drastically diminished.

3. TiFF IFilter: Corporate Document search improved

TIFF IFilter enables searching for TIFF documents based on text content. When loaded, TIFF IFilter performs optical character recognition (OCR) processing of TIFF images, and then it provides the recognized text to the caller to build the search index.

TIFF IFilter focuses on text-based documents, which means that searching will be more successful for documents that contain clearly identifiable text (for example, black text on a white background), and less successful for documents that contain mixed content (for example, artistic text or text inside of pictures). Additionally, low-quality images and mixed languages can negatively impact OCR processing, and consequently, lower the quality of the search results.

Visendo Fax Server 10 has integrated an TIFF IFilter enabling your documents to be tagged before being stored on Microsoft SharePoint Server 2010 or 2007. This tagging makes corporate documents search easy and secure.
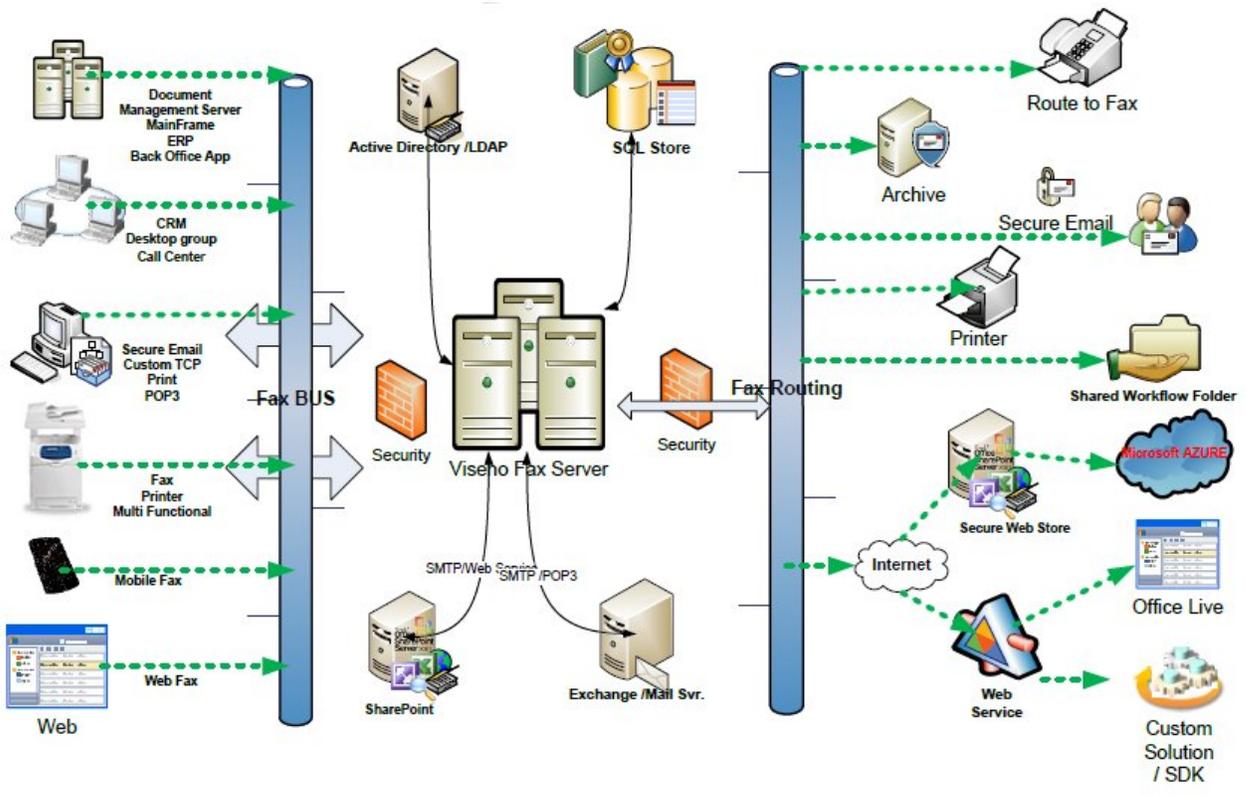

Visendo products:

Visendo Fax Server suite - Server suite provides support to Modern Fax Technology Features and automates sending, receiving, and managing your network faxes from your desktop, while integrating full faxing functionality with your existing email system — all while providing unlimited fax sends and receives without monthly fees or per-transmission charges.

Pop Connector - is a POP3/IMAP-Connector for your mail server when sending and receiving your e-mail. It retrieves incoming e-mails from your POP3/IMAP-Accounts on the Internet and transmits them to the correct recipient, and vice versa.

Fax to email solution - by simply using an ISDN card and Visendo fax@MAIL, you can receive faxes per email with no auxiliary server needed.

Visendo Mail Checker - Visendo Mailchecker is a pretty, easy to use anti-spam and anti-pishing tool that works with any email client and, thanks to Multi-layered filters, has a good detection rate.
