

About Fax@Mail

With your ISDN card and Visendo fax@MAIL, you can receive faxes via email. They are saved as images(PDF, JPG, TIF, SFF) and can be sent to your email client - e.g Outlook.

This method is an extension of computer-based faxing, and involves using a gateway to the Internet to convert between faxes and emails. It is often referred to as "fax to mail" or "mail to fax".

This technology is more and more replacing the traditional fax machine because it offers the advantage of dispensing with the machine as well as the additional telephone line.

Key features for Fax@Mail 10
